Professional Summary

Aspiring DevOps Engineer with a strong foundation in cloud computing, automation, CI/CD, infrastructure as code, containerization, and Linux systems administration. Skilled at identifying inefficiencies and building automated solutions that improve reliability and speed of software delivery. Effective collaborator who communicates clearly with cross-functional teams to resolve technical challenges. Highly motivated to continuously learn and apply modern DevOps tools and best practices in real-world environments.

Education

Bachelor of Computer Applications (BCA)
KLE BCA College, Chikodi

Expected 2027
CGPA: 8.6

Technical Skills

- **Programming:** Python, Shell Scripting, SQL
- **Operating Systems:** Linux
- **Version Control:** Git, GitHub
- **Cloud:** AWS (EC2, S3, IAM)
- **CI/CD Tools:** Jenkins, GitHub Actions
- **Containers & Orchestration:** Docker
- **Core Concepts:** CI/CD, DevOps, Linux Administration, Cloud Computing

Projects

Job Portal Deployment Automation

Technologies: AWS, Docker, Jenkins, Git, Linux

Live Demo

- Built and configured a scalable job portal application environment using cloud infrastructure and containerization
- Automated build, test, and deployment workflows using Jenkins CI/CD pipelines
- Deployed application services on AWS EC2 with S3 for static asset storage
- Configured monitoring and version control workflows to streamline release cycles
- **Impact:** Reduced deployment time by 70%, automated the end-to-end build and deployment process, and improved overall application availability

Ecommerce CI/CD Pipeline

Technologies: Docker, Kubernetes, AWS, GitHub Actions

Live Demo

- Containerized e-commerce application components using Docker for consistent, portable deployments
- Created automated CI/CD pipelines using GitHub Actions to streamline integration and delivery
- Deployed and orchestrated services on AWS using Kubernetes for improved scalability
- **Impact:** Improved deployment efficiency, reduced manual effort in release processes, and increased application reliability
